
Development Philosophy

Our goal is to deliver the best opportunity-intelligence experience possible within a low-cost architecture.

OBJECTIVE

Build a free, low-cost AI mobility assistant that:

- ♦ Attracts users quickly
- ♦ Captures high-quality talent/opportunity data
- ♦ Learns user intent and outcomes
- ♦ Trains future matching/recommendation systems

This Phase 1 product is essentially an intelligent opportunity discovery and mobility data engine.

MILESTONE 1: Core Foundation & User Intake (Week 1)

Goal: Build a sophisticated personalization foundation for user interaction

Intelligent Query Layer

System should understand intent, geography, opportunity type, funding needs, mobility constraints – not just keyword matching.

Key Deliverables:

- ♦ WhatsApp integration for user onboarding
- ♦ Create a deep user profile engine: UI shell for the web dashboard for profile creation
- ♦ System enables voice + text input
- ♦ User profile system:
 - Structured intake – capture education, skills, certifications, career interests, geographic preferences, optional resume/CV upload and parsing
 - Storage – database setup + stores user data, preferences, etc.
- ♦ Backend setup:
 - Node.js (Express or serverless functions)
 - Supabase/PostgreSQL
- ♦ Event-driven pipeline (incoming query → processing queue)

Design Logic: No heavy APIs + keep everything modular and serverless where possible

Success Criteria:

- ♦ User can submit query → system stores profile → basic response returned
- ♦ The system already feels intelligent, personalized, and premium even before large-scale aggregation.

MILESTONE 2: Deep Opportunity Discovery & Verification Engine (Week 1-2)

Goal: Build a high-quality scraping-first, API-light aggregation system

Key Deliverables:

- ♦ Multi-Layer Discovery Engine
- ♦ Lightweight search orchestration using simple search endpoints (e.g. Google scraping via custom *HTML scraping*):
 - Custom web scrappers that pull real opportunities on demand:
 - Job boards (target high-yield ones only)
 - Scholarship/grant portals
 - University sites
 - Government/visa pages – mobility programs / foreign worker programs
 - Foundations
 - Social media signals
- ♦ RSS feed ingestion where available
- ♦ Data normalization layer:
 - Convert raw HTML → structured opportunity objects

Design Logic:

- ♦ Avoid broad integrations
- ♦ Focus on high-signal sources only

- ♦ Cache results to reduce repeated scraping

Quality-Control Filtering:

Strong filtering for:-

- ♦ sponsorship
- ♦ international eligibility
- ♦ African applicant compatibility
- ♦ active deadlines
- ♦ legitimacy verification

Critical feature == Duplicate + Noise Reduction

Success Criteria: System returns real, cleaner, more relevant, more trustworthy current opportunities than generic Google searching, in readable, structured format without relying on expensive APIs.

Source Credibility Scoring:

Prioritize:-

- ♦ verified organizations
- ♦ direct ATS sources
- ♦ official institutions
- ♦ government pages

MILESTONE 3: Rule-Based Filtering + AI Ranking, Guidance & Outcome Intelligence Layer (Week 2-3)

Goal: System transforms listings into actionable intelligence + maximizes relevance using logic + minimal AI calls

Key Deliverables:

- ♦ Rule-based filtering engine:
 - Keywords: "visa sponsorship", "foreign", "international".
 - Region + eligibility filters
- ♦ Heuristic scoring system – Personalized Match Scoring:
 - Relevance to user profile
 - Source credibility
 - Opportunity type match:
 - Rank opportunities using:-
 - background fit
 - sponsorship compatibility
 - competitiveness
 - funding alignment
 - geographic viability
- ♦ AI Guidance Layer (optimized for cost):
 - Query interpretation (short prompts)
 - Application guidance (only for top results)
 - Acceptance probability scoring (rule-based heuristics are fine for MVP)
 - AI-generated match explanations ("Why this opportunity fits your profile")
- ♦ Contact extraction:
 - Domain parsing + simple scraping (no heavy enrichment APIs)
 - Contact Enrichment: Extract email contacts for hiring manager, admissions office/officer, grant officers, and recruiter
 - Full web dashboard displaying results with all enriched fields (title, deadline, funding, match score, contact info, AI guidance)
 - Backend analytics dashboard (queries made, top opportunities surfaced, user activity)
- ♦ Generate:
 - application strategy
 - SOP recommendations
 - CV improvements
 - eligibility explanations
 - missing qualification analysis

Design Logic:

- ♦ Use AI sparingly and strategically
- ♦ Let rules + heuristics do most of the work

Success Criteria:

Top 10 results surfaced per query - highly relevant and ranked

- ♦ Include guidance + basic contact info
- ♦ User must feel that this app understands his/her situation better than LinkedIn or Google search

MILESTONE 4: Engagement, Learning & Premium Intelligence Layer (Week 3-4)

Goal: Deliver a usable product with sustained engagement + retention, and future monetization infrastructure.

Design Logic:

- ♦ Keep frontend simple
- ♦ Focus on repeat usage and retention

Key Deliverables:

- ♦ WhatsApp output formatting:
 - Clean, structured responses
- ♦ Web dashboard:
 - Opportunity cards
 - Filters (location, type, deadline)
- ♦ Bookmark/save functionality
- ♦ Smart alerts:
 - Notify users about deadlines, new matches, profile gaps, and high-fit opportunities
- ♦ Background jobs:
 - Deadline tracking
 - Automated alert system, via website, email, (e.g. <3 days remaining)
- ♦ Admin Intelligence Dashboard:
 - Monitor queries, results, outcomes
 - Monitor search trends, user growth, success rates, country demand, high-performing opportunity sources
- ♦ Opportunity Tracking:
 - Track saved opportunities, applications submitted, interviews, and outcomes
- ♦ Feedback & Learning Loop
 - Collect user feedback, successful outcomes, and ranking accuracy signals

Success Criteria:

- ♦ Users receive actionable results, return to platform, and get timely alerts
- ♦ Platform becomes habit-forming, trusted, and increasingly intelligent over time

The final project deliverable is a (1) fully deployed MVP live on web and WhatsApp, (2) admin intelligence dashboard, and, (3) clean documented code handed over.

Payment Schedule – Upon Delivery of Each Milestone

Project Milestone Delivered	Payment Timeline	Payment Amount
MILESTONE 1: Core Foundation & User Intake	End of Week 1	\$300
MILESTONE 2: Deep Opportunity Discovery & Verification Engine	End of Week 2	\$250
MILESTONE 3: Rule-Based Filtering + AI Ranking, Guidance & Outcome Intelligence Layer	End of Week 3	\$250
MILESTONE 4: Engagement, Learning & Premium Intelligence Layer	End of Week 4	\$400
